BEYOND QUALITY

Over the past 140 years, F. Ball and Co. Ltd. has built a reputation for the quality and reliability of its flooring adhesives, with a track record of launching innovative products to remain the market leader.

To ensure that flooring contractors are provided with adhesives that exceed global standards, the F. Ball Technical Service team, based at F. Ball's Staffordshire headquarters, continually test a vast range of floorcoverings with adhesives.

It is this rigorous testing that goes into producing this Recommended Adhesives Guide (RAG®), which features over 6,000 adhesive recommendations for floorcoverings produced by over 200 international manufacturers, each one endorsed by the floorcovering manufacturer.

This allows F. Ball to confidently guarantee that the resulting bond will last the lifetime of the flooring installation. As long as the floorcovering manufacturers installation and our advised preparation procedures are followed, you can have 100% peace of mind that your installations will perform exactly as expected.

For convenient, on-the-go access, the free and continuously updated RAG® app is a popular way to access this information. It's available for download on the Apple App Store or Google Play.

As always, the F. Ball Technical Service Department are also on hand to answer your questions about floorcovering-adhesive compatibility, as well as any other aspect of flooring installation, throughout the working day. You can find out about the various ways of contacting them, including phone and email, on F. Ball's website.

Paul Starkey – F. Ball Liaison Manager

UNRIVALLED SUPPORT

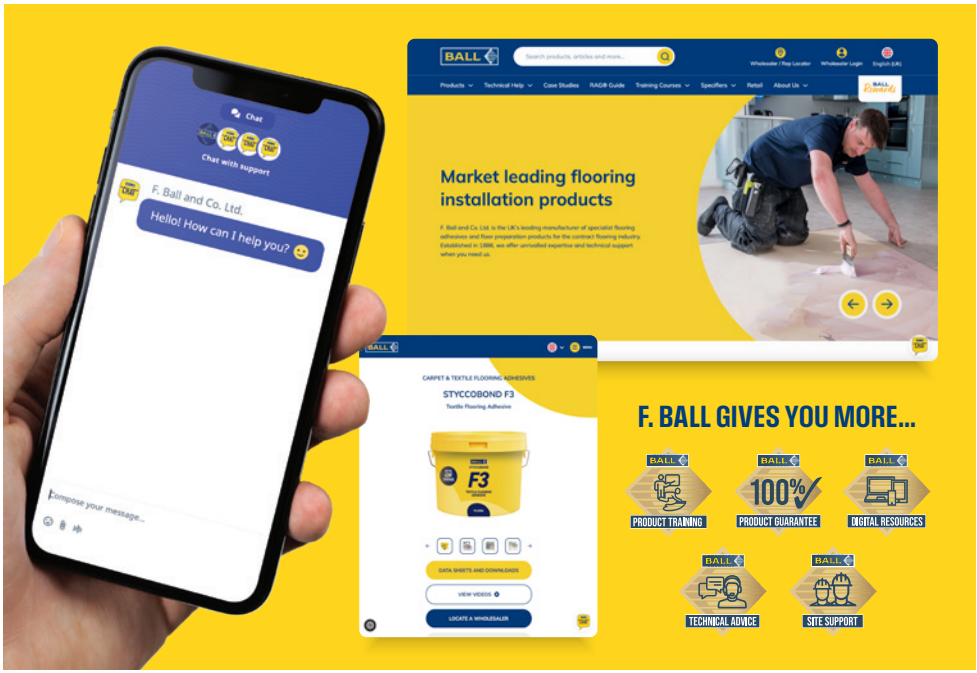

Product quality and innovation is backed up by F.Ball's industry-leading customer and technical support.

The company's head office-based Technical Service Department is on hand Monday to Friday to answer questions about subfloor preparation and floorcovering installation, while on-site support is provided by a team of regional technical representatives and dedicated retail support staff. The service allows industry professionals to obtain on-the-spot site assessments and advice on the best course of action for a particular flooring project when using F. Ball products.

Visitors to F. Ball's website can now get quick answers to questions about F. Ball products and how to use them via a new online chat facility.

Alternatively, enquiries can be made via email or the company's social media channels. F. Ball customers can also request virtual site visits, using video messaging platforms such as WhatsApp video, for a quick and convenient alternative to in-person site visits.

Flooring professionals can also consult F. Ball's digital resources. The F. Ball website features a library of video tutorials covering all aspects of subfloor preparation and flooring installation, along with a useful product coverage calculator and interactive Recommended Adhesives Guide.

INTRODUCTION

Information on other aspects of the selection and use of adhesives are given in our Product Data Sheets, which can be viewed and printed directly from the F. Ball and Co. Ltd. website: **www.f-ball.com**

Many manufacturers have detailed installation instructions for their floorcoverings and should be consulted for their advice.

ADHESIVE SELECTION

Flooring products are grouped by backing type. Some product names appear with several backing types and it is important to ensure that the backing is correct as this may affect the choice of adhesive.

MULTIPLE LISTINGS

When more than one adhesive is listed, selection should be made by considering such factors as site conditions, type and absorbency of the subfloor, flammability requirements etc. Information is given on the individual adhesive Product Data Sheets and these must be referred to in conjunction with this guide to ensure that the correct selection is made.

Some products are listed with water resistant adhesives. This is to suit areas subject to surface water and does not imply that the floorcovering is suitable for use outdoors or where the subfloor is damp.

SPECIAL NOTE

The following special note relates to F41 in the RAG®.

**Where PVC backed carpet tiles are to be laid over fully flexible vinyl flooring use STYCCOBOND F41 applied in bands to the back of the tile, avoiding the edge.*

DUAL BOND SYSTEMS

Certain carpets as specified in the RAG® can be laid into wet STYCCOBOND F40 to produce a permanent bond.

VERTICAL BOND

Some floorcoverings are suitable for use on stairs, steps and walls. Please consult the floorcovering manufacturer or installation guides.

WHEN MORE THAN ONE ADHESIVE IS LISTED, SELECTION SHOULD BE MADE BY CONSIDERING SUCH FACTORS AS SITE CONDITIONS, TYPE AND ABSORBENCY OF THE SUBFLOOR, FLAMMABILITY REQUIREMENTS ETC.

RELEASE UNDERLAY SYSTEMS

Some underlay systems, as specified by the manufacturers, can be fixed to the subfloor with STYCCOBOND F40.

STYCCOBOND F40 combines high shear with low peel adhesion to reduce lateral movement of release underlays under trafficking and thus minimise rucking, while enabling the carpet and underlay to be replaced when required.

Suitable carpets as specified by the manufacturers, may be bonded to the release underlay using the recommended permanent bond adhesive.

Not all carpets are suitable for use with release underlays. Do not use rubber foam backed carpets; PVC and polyurethane foam backed carpets. Additionally, the adhesion of the secondary backing with certain tufted carpets is of significant importance.

We suggest the advice of the carpet manufacturer is sought to determine the suitability of a carpet for installation on a release underlay system before acclimatisation of carpets.

Acoustic Underlays for Luxury Vinyl Tiles, adhesive, underlay and tile manufacturer's must be contacted to ensure compatibility.

MADE IN GREAT BRITAIN

QUALITY AND PERFORMANCE WORTH BANGING ON ABOUT.

You know F. Ball, and you know our reputation: we make tried and tested flooring adhesives that guarantee exceptional results every time. It's a reputation worth banging on about. So every now and then, we like to make a bit of noise about it.
Visit f-ball.com/RAG to download your free F. Ball Recommended Adhesive Guide.

BALL

ADHESIVE SELECTION

The drive to help flooring contractors work to ever higher standards, with greater speed and efficiency, as well as increase the longevity of flooring installations, has led to the development of high performance adhesives with a range of specialist properties.

These include adhesives for specific floorcovering types, including Luxury Vinyl Tiles (LVTs), wood and carpet, with performance characteristics needed in certain environments, such as areas subject to extreme temperature fluctuations, moisture or external weather conditions. They also offer features to help contractors in particular situations, such as fast-track properties, high initial grab and high bond strength. In addition, F. Ball's range of IMO certified adhesives help to optimise the appearance and longevity of installations in marine and offshore settings and are tested in accordance with International Maritime Organization (IMO) standards.

So, when it comes to selecting an adhesive for a specific installation, as well as checking the compatibility of chosen floorcoverings and adhesives, it is always advisable to consider products that have been developed for particular applications and types of floorcoverings.

IT IS ALWAYS ADVISABLE TO CONSIDER PRODUCTS THAT HAVE BEEN DEVELOPED FOR PARTICULAR APPLICATIONS AND TYPES OF FLOORCOVERINGS.

TESTING AND DEVELOPMENT

Making sure that flooring professionals can rely on the advice in the RAG® is the task of the F. Ball's Technical Service Department, which spends thousands of hours each year rigorously testing the performance of F. Ball adhesives with a vast range of floorcoverings at the company's purpose-built laboratory at its Staffordshire headquarters.

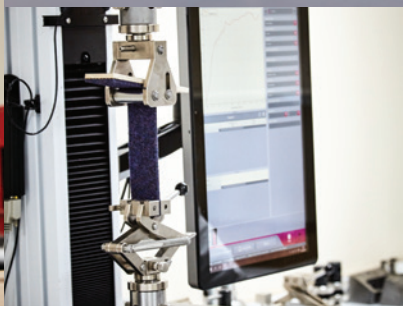

Complying rigorously with British Standards, the tests measure initial grab, as well as bond performance over time, in controlled conditions and using state-of-the-art equipment designed to simulate the effects of ageing.

Only once it is certain that a bond will perform for the lifetime of any flooring installation and the recommendation is endorsed by the floorcovering manufacturer will it be included in the RAG®.

FOR MORE INFORMATION ON THE TESTING THAT GOES INTO PRODUCING THE RAG®, VISIT THE F. BALL WEBSITE.

BRITISH STANDARDS

BS 5325 Installation of textile floorcoverings, provides recommendations of best practice for the design and installation of both woven and non-woven textile floorcoverings.

BS 8203 Installation of resilient floorcoverings provides recommendations of best practice for the design and installation of cork, linoleum, rubber and plastic floorcoverings.

All aspects of site conditions, subfloor preparation and floorcovering installation must be in accordance with either BS 5325 Installation of textile floorcoverings or BS 8203 Installation of resilient floorcoverings, as appropriate.

BS 8204 Code of practice for screeds, bases and in situ flooring. Concrete bases and cementitious levelling screeds to receive floorings.

BS 8201 Code of practice for installation of flooring of wood and wood-based panels.

BS EN 13813 Screed material and floor screeds. Screed material. Properties and requirements.

BS EN 13892-2 Methods of test for screed materials. Determination of flexural and compressive strength.

BS EN 1504-3 Structural and Non Structural repair of concrete structures.

The information in this guide is based on results we have achieved with the floorcoverings listed. Floorcovering manufacturers are involved in continuous research and development, leading to the introduction of new products and the withdrawal of others. As these changes are beyond our control and as site conditions vary, users must ensure the suitability of our products by enquiry or by prior testing.

No liability is accepted for loss or damage arising from incorrect use of the Company's products.

(Monday – Friday, 08.30 to 17.00)

E-mail: technical@f-ball.co.uk

SUBFLOOR PREPARATION

Ensuring a long lasting, visually attractive flooring finish involves following best practice in subfloor preparation prior to the installation of new floorcoverings, including making sure the subfloor is in a suitable condition, applying a smoothing compound to ensure a perfectly smooth base for the receipt of floorcoverings and remembering to prime beforehand.

Before a smoothing compound is applied, the subfloor must be checked to ensure that it is suitably sound, smooth and dry enough for the receipt of subfloor preparation products and floorcoverings. This should include the removal of any surface contaminants and old adhesive residues (when not using a smoothing compound designed to be applied directly over these residues).

It is also recommended that flooring contractors check for excess subfloor moisture levels and deploy a moisture management solution where necessary.

Unchecked excess subfloor moisture, whether residual construction moisture or rising damp, continues to be the leading cause of floor failure, resulting in major inconvenience and remedial work.

For an extensive guide to subfloor preparation, including measuring subfloor moisture levels, visit the F. Ball website, or request a copy of our Subfloor Preparation Guide.

ENSURING A LONG LASTING, VISUALLY ATTRACTIVE FLOORING FINISH INVOLVES FOLLOWING BEST PRACTICE IN SUBFLOOR PREPARATION.

STEP 1 - CHECK IT

Undertake an initial test for the presence of moisture in the subfloor using a radio frequency moisture meter such as the Tramex CMEX 5, Protimeter MMS3 or Protimeter Aquant™.
If moisture is present, investigate further.

STEP 2 - MEASURE IT

Confirm and accurately measure the moisture levels present using a F. Ball DIGITAL HYGROMETER.
If the relative humidity is below 75%** it is safe to proceed with fitting. If above 75% RH go to step 3.

WHAT IS THE PROBLEM?

It was only in 1965 that it became mandatory to install a Damp Proof Membrane (DPM) in new buildings. Where there is no DPM or in cases where the DPM has failed, moisture can rise into the slab from the ground. In cases of new construction the slab itself will contain a considerable amount of residual moisture and although this will generally reduce with time, dependent on environmental conditions, this can cause a significant delay to building occupancy. There are of course, other circumstances where a floor slab may temporarily absorb water, after a flood, broken pipe etc.

In any circumstance where the floor slab contains significant amounts of moisture, if floorcoverings are installed without precautions being taken, the floorcovering will reduce moisture release thereby trapping moisture under the covering with the potential to cause blisters or even failure of the adhesive. When problems like this occur (after floorcovering installation) there is no 'quick fix' other than to undertake an expensive rip out, then to either let the floor dry or install a Waterproof Surface Membrane (WSM) and install a new floor covering.

The difficulty is that moisture is not always visible and estimates of drying times can be very inaccurate. The best estimate of how long a floor takes to dry to an acceptable level of 75% RH is at a rate equivalent to 1 day per 1mm of subfloor thickness up to 50mm.

So typically a 50mm thick screed will take at least 50 days to dry. Thicker floors can dry at an even slower rate than that. Given the financial pressure to occupy a building the temptation is to take a risk and proceed with installing the floorcovering - however, the costs of getting this wrong can be substantial, not only in wasted material but because occupancy may be even further delayed while remedial action is taken.

In certain circumstances underfloor heating may be used to dry the screen in accordance with suppliers instructions.

HOW CAN YOU TELL IF IT IS SAFE TO PROCEED WITH INSTALLING A FLOORCOVERING?

Where there is a suspicion that the floor may contain moisture, this needs to be carefully checked - visual inspection is inadequate as what may appear dry on the surface may conceal retained moisture that is being slowly released.

Firstly the presence or absence of moisture can be checked easily using a radio frequency moisture meter such as the Tramex CMEX 5, Protimeter AQUANT™* or Protimeter MMS3*. These devices are quick and easy to use and give instant readings that indicate whether moisture is present or not.

If no moisture is present then the flooring installation can proceed, but if there is an indication of moisture presence, then this needs further investigation.

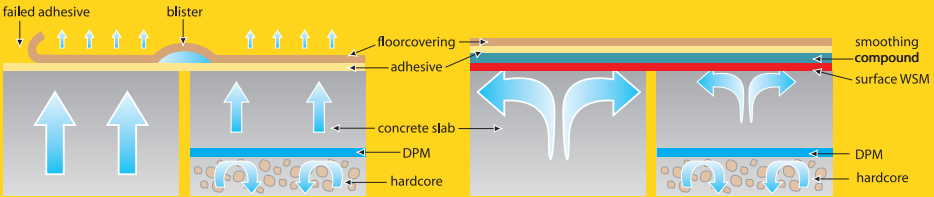

Measurements need to be made at a number of points across the floor and over a period of time to allow measurement of moisture release from the slab. Traditionally such measurements have been undertaken using a hair hygrometer that itself required careful calibration immediately prior to use. This method has now been superceded by the pre-calibrated F. Ball Digital Hygrometer* which is temporarily sealed to the floor surface and gives a direct read out of the relative humidity of the floor. Thicker power floated slabs will take longer.

An alternative measurement method is to utilise a Tramex CMEX 5 or Protimeter MMS3* in conjunction either with humidity boxes (similar to those used with the digital hygrometer) or using moisture probes that are inserted into pre-drilled holes in the slab.

Where Relative Humidity (RH) levels are measured at below 75%**, flooring may proceed without further treatment. At levels over 75% further treatment is required.

For detailed operating instructions and information on how to interpret results please see the relevant product data sheets and operating instructions.

****For wood floors F. Ball recommend a maximum of 65% RH. Consult wood floor manufacturer.***

Floorcovering traps moisture release causing blisters or damage to adhesive layer allowing floorcovering to lift

Waterproof Surface Membrane controls moisture release and allows floorcovering to be installed

STEP 3 - SOLVE IT

If relative humidity is above 75%** treatment is required. F. Ball recommend the application of the appropriate Stopgap waterproof surfaces membrane or Stopgap Isolator Membrane.

SOLVE THE PROBLEM WITH A WATERPROOF SURFACE MEMBRANE

A Waterproof Surface Membrane (WSM) is designed to control water vapour transmission. WSM's are typically formed by applying one or two coats of an Epoxy Resin which bonds to the floor surface to create a waterproof layer. A proven alternative is a WSM in the form of sheet membranes such as Stopgap Isolator.

Stopgap Isolator is a loose lay fibre reinforced vinyl which sits proud of the subfloor yet allows a floorcovering to be bonded to its upper surface. Once installed it is very hard to believe that the floorcovering is not adhered directly to the floor. With Isolator, the WSM can simply be lifted and removed at a later date without any damage to the subfloor - an important consideration where heritage floors are concerned or where a building is to be occupied on a limited tenancy and floors will later need to be returned to their original condition.

The appropriate treatment depends on the Relative Humidity (RH) of the floor:

The F. Ball high performance range of Stopgap waterproof surface membranes; F77, F78 and Stopgap Isolator Membrane have been specifically developed to provide a moisture solution for Relative Humidity (RH) values between 75% and 98%. Please refer to the products technical data sheet or contact Technical Service for advice.

If there is no DPM or the DPM is damaged, F. Ball recommend Stopgap F77 or Stopgap Isolator Membrane.

For installations where speed is important, Stopgap waterproof surface membranes can cure in as little as 60 mins at 20°C. Alternatively, Stopgap Isolator can be laid directly on the floor and a floorcovering installed immediately using the recommended Styccobond adhesive.

WHAT IF THERE ARE OTHER PROBLEMS?

If the floor suffers from other problems in addition to moisture, these can generally be overcome by using one of F. Ball's specialist range of underlayments in conjunction with the WSM. For example:

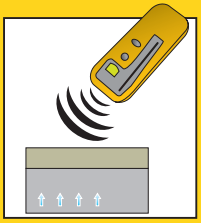

- Stopgap 1200 or Stopgap 1500 smoothing compounds can be used under Stopgap Waterproof Surface Membranes.
- When time is important, Stopgap Fast-Track 30 can be used over the appropriate Stopgap WSM. Stopgap Fast-Track 30's unique rapid setting, rapid drying technology allows the floor to be smoothed and levelled and is ready to receive floorcoverings from 45 minutes.

For details of other products that can be used in conjunction with WSM's please either contact F. Ball's Technical Service Department, view the F. Ball website online at **www.f-ball.com** or consult F. Ball publications or Individual Product Data Sheets.

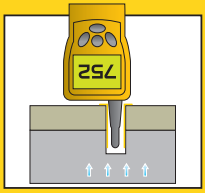

Many old floors may well have previously been painted or be suffering from efflorescence. Where the subfloor is flaking or contaminated, Isolator Membrane provides a solution as well as providing an effective WSM. For advice on subfloors refer to the F. Ball Subfloor Preparation Guide.

F. Ball manufacture a complete range of primers and adhesives for use with WSM's.

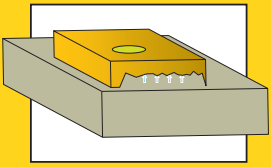

Radio meters detect the presence of moisture

Moisture probes measure humidity within the slab

Digital hygrometers are sealed to the slab and accurately measure relative humidity

THIS CHART IS FOR REFERENCE ONLY. ALWAYS REFER TO THE CURRENT TECHNICAL DATA SHEET, SUBFLOOR PREPARATION GUIDE AND/OR OUR TECHNICAL SERVICE DEPARTMENT FOR SPECIFIC GUIDANCE.

[1] STOPGAP 600 is designed to be used in conjunction with STOPGAP FAST-TRACK 30, STOPGAP 300, STOPGAP 800, STOPGAP 1200 and STOPGAP 1500. Time to cover is therefore dependent on combination used.

[2] At least 75% of the subfloor must be exposed and sound.

[3] In certain situations priming may not be necessary, for example, when installing textile floorcoverings. However, we would recommend priming with STOPGAP P131 diluted to 4:1 with water to prevent uncontrolled drying of the compound, pin-holing and to aid the flow and workability.

THE COMPLETE SOLUTION FOR SUCCESSFUL WOOD INSTALLATION

F. Ball and Co. Ltd. provide a range of high performance products to cover all three stages essential to successful wood floor installation.

We provide products for detecting, measuring and treating subfloor moisture. We have a choice of high performance floor smoothing compounds. We also have a comprehensive range of outstanding wood adhesives and accessories. All you need to install wood floors from a single source.

Further Information
You can view technical and safety datasheets at: ***www.f-ball.com***

MOISTURE MEASUREMENT AND TREATMENT

DIGITAL HYGROMETER

Simple and reliable way to accurately measure the Relative Humidity (RH) of a subfloor and decide whether a waterproof surface membrane is required. It is pre-calibrated and ready to use.

Note: F. Ball recommend a Relative Humidity reading of 65% or less for wood floor installations, however, wood suppliers should also be consulted.

STOPGAP F77
One-Coat Waterproof Surface Membrane

Suppresses the passage of construction moisture and rising damp up to 98% RH. It is pigmented black and can be applied direct over underfloor heating screeds.

STOPGAP F78
Two-Coat (one part) Waterproof Surface Membrane

A two-coat solvent free, one component, ready to use system which dries rapidly allowing early installation of floorcoverings in fast-track building programmes. Isolates residual construction moisture where values reach 95% RH.

FLOOR SMOOTHING

STOPGAP 300
Heavy-Duty Smoothing Compound

A water mix compound that can be hand or pump applied in light to heavy-duty interior areas. It is fast drying and has excellent self-smoothing properties.

STOPGAP 700
Super Flexible, Fibre Modified Smoothing Compound

A fast drying, fibre-modified smoothing compound enabling fast-track installation of new floorcoverings over flexible substrates.

STOPGAP 1200
High Performance Smoothing Compound

A low odour, fast setting, fast drying, two component smoothing compound suitable for preparing sound internal subfloors prior to the installation of new floorcoverings.

STOPGAP 1400
High Flow Smoothing Compound

A high flowing, two-component smoothing compound suitable for preparing sound internal subfloors prior to the installation of new floorcoverings.

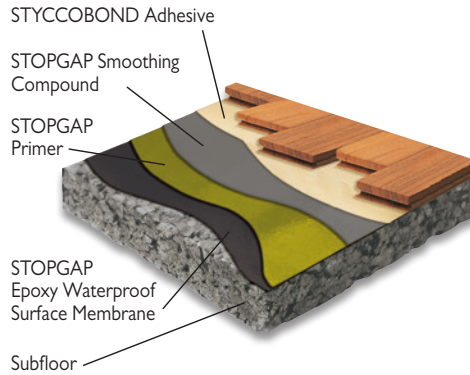

STOPGAP 1500
High Performance Water-mix Compound

A fast-setting, fast-drying water-mix smoothing compound. It offers excellent self-smoothing properties and its moisture tolerant formulation means it can be used under Stopgap waterproof surface membrane.

WOOD ADHESIVES RANGE

Selection of the correct adhesive is critical. All wood flooring differs and dependent on the type of wood and size of product to be installed, different adhesives will be required. Our Technical Service Department can guide you to the most suitable products to ensure a successful and long lasting installation.

ADHESIVES

STYCCOBOND B95
High Performance, Flexible Wood Flooring Adhesive

Secures wood plank, wood strip, engineered and semi-solid flooring. Trowel applied, it produces a flexible film that accommodates some movement within wood flooring over its life-time.

STYCCO FLEX
Rapid Curing Flexible Adhesive

Fix stair nosings without the need for mechanical fixing to suitably sound substrates. It is also suitable for bonding carpet gripper, PVC cladding, skirting boards, architrave and trims. It can also be used to secure header rows when installing wood flooring.

STYCCOBOND B90
Woodworking Adhesive

For tongue and groove loose-lay systems. Can also be used as a general purpose woodworking adhesive. A PVA emulsion adhesive that provides the installer friendly benefits of being solvent free, low odour and non-hazardous. Durability Class D3 of BS EN204.

PRODUCT GUARANTEE

ADHESIVES

STYCCOBOND Adhesives are guaranteed against manufacturing defects. F. Ball and Co. Ltd. certify that when properly set, dry or cured they will secure the floorcoverings and other materials described in our Recommended Adhesives Guide and other technical data published by us, and current at the date of the installation.

Conditions of Guarantee

This guarantee is conditional on each of the following terms having been complied with by you.

(a) The adhesive must be stored as specified on the label.

(b) The installation must be carried out precisely in accordance with the instructions and recommendations published in the current Installation Guide or other current technical data published by us relevant to the floorcovering and other materials.

(c) The floorcovering or other materials must have been subjected only to normal traffic.

(d) **Adequate facilities must be provided to us to enable examination of the site and materials. Also sufficient time must be provided to us to fully investigate the complaint and to report on the reason for it arising.**

Compensation

In the event of bond failure caused by a manufacturing defect in the STYCCOBOND Adhesive, F. Ball and Co. Ltd. will:

(a) Pay reasonable labour costs incurred for remedial work.

(b) If, in our opinion, the floorcovering or other material, due to bond failure, is not in a satisfactory condition to be re-laid, we will pay the manufacturer's price for replacement material of similar type or quality.

(c) Supply free of charge, sufficient STYCCOBOND Adhesive to secure the floorcovering or other materials.

FLOOR SMOOTHING COMPOUNDS AND MEMBRANES

STOPGAP Floor Smoothing Compounds and Membranes are guaranteed against manufacturing defects. F. Ball and Co. Ltd. certify that they are suitable for the conditions, sites and traffic described in our current technical data.

These Compounds and Membranes are guaranteed to create surfaces suitable for the application of STYCCOBOND Adhesives to secure floorcoverings.

Conditions of Guarantee

This guarantee is conditional on each of the following terms having been complied with by you.

(a) The Compounds and Membranes must be stored in accordance with the conditions specified on the data sheet or label.

(b) The substrate must be in the suitable condition described in our brochure 'Subfloor Preparation Guide', or other current technical data published by us.

(c) The Smoothing Compound and Membranes must be mixed and laid in accordance with our printed instructions.

(d) **Should the Smoothing Compound or Membrane not set and dry in the period quoted, not bond to the substrate, or disintegrate, the failure must be reported to us immediately and we must be provided immediate access to examine it in situ before it is uplifted and obtain samples for analysis. Any unused Smoothing Compound must also be retained for inspection and sampling by us.**

(e) In the case of Isolator Membrane, prior to application of adhesive, you must ensure there are no surface defects or transit damage within the Isolator Membrane that may lead to grin through and affect the appearance of the finished floorcovering. Should surface defects or damage be noticeable, or you are in doubt, do not proceed with installation and contact us immediately. Should you proceed with installation of the membrane in this condition any compensation under a claim under this guarantee to be paid by F. Ball and Co. Ltd. will be limited to the value of the cost of the Isolator Membrane only.

HEALTH & SAFETY

In accordance with the requirements of Section 6 of the Health and Safety at Work etc., Act 1974 (as amended), information is provided for our customers to ensure, so far as is reasonably practicable, that they can meet their legal obligations under the Act.

Health and Safety information in respect of our products is provided on appropriate safety data sheets. Certain Health and Safety information can also be found at www.f-ball.com or on product labels and within technical literature published by the Company.

Products supplied by this Company could, if incorrectly used, handled, processed, stored, transported or disposed of, give rise to risks to Health and Safety. Prior assessment of the suitability of any product for its intended purposes must be made and all relevant Health and Safety requirements must be studied, understood and applied.

Compensation

Should it be established that the Smoothing Compound or Membrane has a manufacturing defect, subject to (e) above, F Ball and Co. Ltd. will:

(a) Pay all reasonable labour costs incurred for removing the defective Compound or Membrane.

(b) Supply free of charge STOPGAP Compound or Membrane for the replacement.

(c) Pay all reasonable labour costs for relaying.

WWW.F-BALL.COM

F. Ball's website is the most comprehensive source of product information with easy navigation that makes it extremely user friendly.

Available for instant view or download are Technical Data Sheets, Safety Data Sheets, Range brochures and Selector Charts.

You can view details of all new products and promotions in the Latest News section. The new website also includes on-line product familiarisation and training in the form of short product videos with commentaries.

If you still need additional information, be sure to send your enquiries to the company's Technical Service Department, who will respond by phone or email with advice and recommendations.

ARBITRATION

Should you not agree with our decision in relation to any of the guarantees above, the dispute may be submitted to an Independent Arbitrator to act as an arbitrator (not as an expert) to be agreed by you and us (or in default of agreement within 14 days of being proposed as then selected by us) whose decision shall be accepted as conclusive and legally binding on all parties. Responsibility for payment of the costs of the parties shall be as determined by the Arbitrator.

MADE IN GREAT BRITAIN

BALL

READY, STEADY... FLOW!

Hit the ground running with STOPGAP 1400. Our High Flow smoothing compound gets projects underway as quickly and smoothly as possible. Designed to maximise ease of use and provide an outstanding finish. Its fast-setting formula is walk-on hard from just 90 minutes and new floorcoverings can be installed from 12 hours. **Find out more at f-ball.com/stopgap1400**
